WILO-PARA SELF CONTROL / SETTING

Differential pressure variable $\Delta p-v$ (I, II, III)

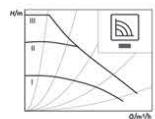

Recommended for two-pipe heating systems with radiators to reduce the flow noises at thermostatic valves.

Constant differential pressure $\Delta p-c$ (I, II, III)

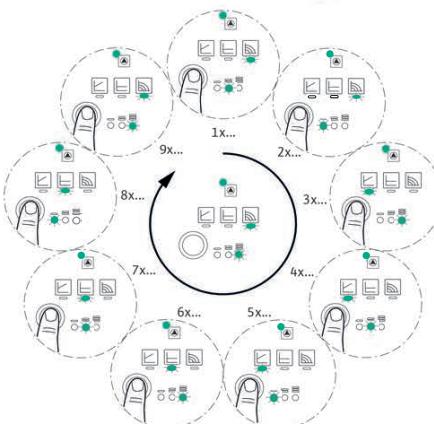

Recommended for underfloor heating or for large-sized pipes, applications without a variable pipe network curve (e.g. storage charge pumps) or single-pipe heating systems with radiators.

Constant speed (I, II, III)

Recommended for systems with fixed system resistance requiring a constant volume flow and for replacement of AC pumps.
